Marcin Zieliński

Software Prod & Plat Eng Sr Analyst / GenAI Developer *Level 10*

P&PES (ATC)
POLAND

PROFESSIONAL BACKGROUND

In the last four years, I have gained valuable commercial experience in web development, leveraging technologies such as .NET and ReactJS. This experience has allowed me to refine my full-stack development capabilities, including building and testing complex web applications, working with API integrations, and implementing solutions like Google Tag Manager. My unique background in both manufacturing automation and web development allows me to approach challenges with a diverse skill set, combining precision engineering with modern software development practices.

With over 15 years of diverse experience in technology, I have transitioned from a CNC programmer specializing in 3D CAD/CAM software and NC/G-code (2008-2021) to a skilled software developer. While working as a CNC programmer, I also maintained in-house VB applications and automated workflows using Python, sharpening my programming and problem-solving skills.

PROJECT EXPERIENCE

Client: Leading Aviation engine designer *(10.2025-12.2025)*

Short project data: *10 people in team, Short term*

Role description & responsibilities: As a Full-Stack Developer I was responsible for delivering end-to-end features across .NET 8, Angular, and Databricks. I designed and implemented backend endpoints in .NET 8 and created corresponding database schemas to support new functionality. On the frontend, I developed Angular components using TypeScript, ensuring clean architecture and code quality with ESLint and SonarQube. To support local development and testing, I built Python-based mocks simulating Databricks behavior. Additionally, I implemented a .NET 8 pipeline query executor to streamline data processing workflows.

Technologies: .NET 8, Angular, TypeScript, Databricks, Python, SonarQube, ESLint.

Client: Leading ERP systems vendor *(02.2025-05.2025)*

Short project data: *4 people in team, Short term*

Role description & responsibilities: Developed a NetBox plugin with a Django backend and JavaScript/TypeScript frontend. Designed REST APIs and Postgres schemas. Collaborated with the team and customer to select technologies and design a floor plan visualization. Contributed to CI/CD with GitHub Actions and validated endpoints using Postman.

Strengthened skills in API design, containerized development, and full-stack plugin architecture.

Technologies: JS, TS, Django, Python, Netbox, Docker, Postman

Client: Hospitality industry client *(09.2022-12.2024)*

Short project data: *agile, 10 people in team, long term project*

Role description & responsibilities: As a Full-Stack Developer I have delivered end-to-end features across the stack using C# (Dapper) and ReactJS. Built cron jobs with RabbitMQ for scheduled tasks and ensured robust test coverage with xUnit and React Testing Library.
Led the migration from Enzyme to React Testing Library, providing documentation and team training.
Integrated Google Tag Manager with Google Analytics and Microsoft Clarity, presenting the setup to stakeholders.
Maintained Postman collections for API testing.

Technologies: C#, .Net, ReactJS, Dapper, RabbitMQ, xUnit, React Testing Library, Docker, Postman, Google Tag Manager

Client: Hospitality industry client *(05.2022-08.2022)*

Short project data: *agile, 6 people in team, long term project*

Role description & responsibilities: Software Developer.

Collaborated with a team to identify and resolve concurrency issues in MongoDB write operations, ensuring data consistency and improving system performance.

Developed a test framework using C# and xUnit, empowering the testing team to efficiently create and run tests for business object validation logic.

Wrote comprehensive unit and integration tests for code to ensure functionality, reliability, and maintainability of software solutions.

Technologies: C#, .Net, MongoDB, xUnit

FUNCTIONAL/ TECHNICAL SKILLS

- *C#, LINQ*
- *.Net*
- *SQL, ORMs (Dapper, EF)*
- *ReactJS*
- *RabbitMQ*
- *xUnit*
- *React Testing Library*
- *GIT*
- *Postman*
- *Google Tag Manager*
- *Langchain*
- *LanGraph*
- *Pandas*
- *Python*
